A Profile of the Working Poor, 2012

n 2012, according to the U.S. Census Bureau, about 46.5 million people, or 15.0 percent of the nation's population, lived below the official poverty level. (See the technical notes section for examples of poverty levels.) Although the poor were primarily children and adults who had not participated in the labor force during the year, according to data from the Bureau of Labor Statistics, 10.6 million individuals were among the "working poor" in 2012; this measure was little changed from 2011. The working poor are people who spent at least 27 weeks in the labor force (that is, working or looking for work) but whose incomes still fell below the official poverty level. In 2012, the working-poor rate—the ratio of the working poor to all individuals in the labor force for at least 27 weeks—was 7.1 percent, little different from the previous year's figure (7.0 percent). (See tables A and 1 and chart 1.)

Highlights

Following are additional highlights from the 2012 data:

- Full-time workers were considerably less likely to be among the working poor than were part-time workers. Among people in the labor force for 27 weeks or more, 4.2 percent of those usually employed full time were classified as working poor, compared with 15.5 percent of part-time workers.
- Women were more likely than men to be among the working poor. In addition, Hispanics and Blacks continued to be more than twice as likely as Asians and Whites to be among the working poor.
- The likelihood of being classified as working poor diminishes as workers attain higher levels of education. Among college graduates, 2.1 percent of those who were in the labor force for at least 27 weeks were classified as working poor, compared with 21.2 percent of those with less than a high school diploma.

- 2. Primary families with at least one member in the labor force for more than half the year.

Note: Updated population controls are introduced annually with the release of January data.

Source: U.S. Bureau of Labor Statistics, Current Population Survey (CPS), Annual Social and Economic Supplement (ASEC).

- Individuals who were employed in service occupations continued to be more likely to be among the working poor than those employed in other major occupational groups.
- Among families with at least one member in the labor force for 27 weeks or more, those families with children under 18 years old were about 4 times more likely than those without children to live in poverty. Families maintained by women were more likely than families maintained by men to be living below the poverty level.

This report presents data on the relationship between labor force activity and poverty status in 2012 for workers and their families. These data were collected in the 2013 Annual Social and Economic Supplement to the Current Population Survey. (For a detailed description of the source of the data and an explanation of the concepts and definitions used in this report, see the technical notes at the end of this report.) The specific income thresholds used to determine people's poverty status vary, depending on whether the individuals are living with family members or are living alone or with nonrelatives. For family members, the poverty threshold is determined by their family's total income; for individuals not living in families, their personal income is used as the determinant.

Demographic characteristics

Among those who were in the labor force for 27 weeks or more in 2012, the number of women (5.5 million) and men (5.1 million) who were classified as working poor was similar. The working-poor rate, however, continued to be higher for women (7.9 percent) than for men (6.4 percent). The working-poor rates for both women and men were essentially unchanged from a year earlier. (See table 2.)

Hispanics and Blacks were more than twice as likely as Whites and Asians to be among the working poor. In 2012, the working-poor rates of Hispanics and Blacks were 13.8 percent and 13.6 percent, respectively, compared with 6.2 percent for Whites and 4.9 percent for Asians. (See chart 2 and table 2.)

Among Asians, Whites, and Blacks, the working-poor rate was higher for women than for men. The rate for Asian women who spent at least 27 weeks in the labor force was 5.4 percent, compared with 4.4 percent for Asian men. The rates for White women and men were 6.6 percent and 5.8 percent, respectively, versus 15.5 percent and 11.4 percent for Black women and men. Among Hispanics, the rates for women and men were little different from each other.

Young workers are more likely to be poor than are workers in older age groups, in part because earnings are lower for young workers, and the unemployment rate for young

Chart 1
Working-poor rate of people in the labor force for 27 weeks or more, 1986–2012

Source: U.S. Bureau of Labor Statistics, Current Population Survey (CPS), Annual Social and Economic Supplement (ASEC).

workers is higher. Among youths who were in the labor force for 27 weeks or more, 12.9 percent of 16- to 19-year-olds and 13.8 percent of 20- to 24-year-olds were living in poverty in 2012, close to double the rate for workers age 35 to 44 (7.4 percent). Workers age 45 to 54, 55 to 64, and those age 65 and older had lower working-poor rates—4.9 percent, 3.9 percent, and 1.8 percent, respectively—than did other age groups.

Educational attainment

Achieving higher levels of education reduces the incidence of living in poverty. Individuals who complete more years of education usually have greater access to higher paying jobs—such as management, professional, and related occupations—than those with fewer years of education. Of all the people in the labor force for 27 weeks or more in 2012, those with less than a high school diploma had

a higher working-poor rate (21.2 percent) than did high school graduates with no college (9.4 percent). Workers with an associate's degree (4.9 percent) and those with a bachelor's degree or higher (2.1 percent) had the lowest working-poor rates. In 2012, at nearly all levels of educational attainment, women were more likely than men to be among the working poor; by race and ethnicity, Blacks and Hispanics generally were more likely to be among the working poor than were Whites and Asians. (See table 3.)

Working-poor rates were fairly similar among White men and women at each major educational level. For example, 18.1 percent of White men with less than a high school diploma who spent at least half the year in the labor force were among the working poor, compared with 22.4 percent of their female counterparts. For White men and women

Chart 2
Working-poor rates of people in the labor force for 27 weeks or more by race and Hispanic or Latino ethnicity, 2012

Note: People whose ethnicity is identified as Hispanic or Latino may be of any race. Source: U.S. Bureau of Labor Statistics, Current Population Survey (CPS), Annual Social and Economic Supplement (ASEC).

who had a bachelor's degree or higher, the proportions classified as working poor were 1.6 percent and 2.1 percent, respectively. By comparison, Black men with less than a high school diploma were considerably less likely than their female counterparts to be among the working poor—27.2 percent compared with 38.2 percent. Among Black men and women with a bachelor's degree or higher, the working-poor rates were similar (3.5 percent and 4.1 percent, respectively). The working-poor rate for Hispanic or Latino men with less than a high school diploma (21.7) percent) was lower than that for their female counterparts (27.8 percent). The working-poor rates for Hispanic men and women with a bachelor's degree or higher were closer, at 3.4 percent and 5.6 percent, respectively. The workingpoor rates for Asian men and women with less than a high school diploma were little different from each other—15.8 percent versus 15.9 percent. Working-poor rates for Asian

men and women with a bachelor's degree or higher were also similar, at 2.3 percent and 1.9 percent, respectively.

Occupation

The likelihood of being among the working poor varies widely by occupation. Workers in occupations requiring higher education and characterized by relatively high earnings—such as management, professional, and related occupations—were least likely to be classified as working poor, 2.2 percent in 2012. By contrast, individuals employed in occupations that typically do not require high levels of education and that are characterized by relatively low earnings were more likely to be among the working poor. For example, 14.1 percent of service workers who were in the labor force for at least 27 weeks were classified as working poor in 2012. Indeed, service occupations, with 3.5 million working poor, accounted for one-third of all

those classified as working poor. Among those employed in natural resources, construction, and maintenance occupations, 8.6 percent of workers were classified as working poor. Within this occupation group, 15.2 percent of workers employed in farming, fishing, and forestry occupations and 10.4 percent of those in construction and extraction occupations were among the working poor. (See table 4.)

Families

In 2012, the number of families living below the poverty level (5.5 million), despite having at least one member in the labor force for half the year or more, was unchanged from last year's figure. Among families with only one member in the labor force for at least 27 weeks in 2012, married-couple families had a lower likelihood of living below the poverty level (9.6 percent) than did families maintained by women (26.8 percent) or by men (16.8 percent). (See table 5.)

Families with children in households with at least one member in the labor force for half the year were much more likely to live below the poverty level than those without children. The proportion of families with children age 17 years and younger that lived in poverty was 13.0 percent, compared with 2.9 percent for families without children. Among families with children under 18, the working-poor rate for those maintained by women (28.6 percent) was higher than that for those maintained by men (17.2 percent). Married-couple families with children had a working-poor rate of 7.5 percent in 2012.

Unrelated individuals

The "unrelated individuals" category includes individuals who live by themselves or with others not related to them. Of the 34.8 million unrelated individuals who were in the labor force for half the year or longer, 3.9 million lived below the poverty level in 2012, an increase from last year's figure. The working-poor rate for unrelated individuals was 11.1 percent, little different from a year earlier. (See table 6.)

Within the group of unrelated individuals, teenagers continued to be the most likely to be among the working poor. In 2012, 47.3 percent of teens who were in the labor force for 27 weeks or more and who lived on their own or with others not related to them lived below the poverty level. Overall, the working-poor rate for men living alone or with nonrelatives (10.3 percent) was lower than the rate for women (12.0 percent). The working-poor rates for unrelated individuals were higher for Hispanics (16.9 percent) and Blacks (15.3 percent) than for Whites (10.3 percent) and Asians (7.8 percent). (See table 7.)

Of the 3.9 million unrelated individuals considered to be among the working poor in 2012, about two-thirds lived with others. These individuals had a much higher working-poor rate than individuals who lived alone. Many unrelated individuals living below the poverty level may live with others out of necessity. Conversely, many of those who live alone do so because they have sufficient income to support themselves. Unrelated individuals' poverty status, however, is determined by each person's resources. The pooling of resources and sharing of living expenses may permit some individuals in this category—who are technically classified as poor—to live at a higher standard than they would have if they lived alone.

Labor market problems

As noted earlier, people who usually work full time are less likely to live in poverty than are those who work part time, yet there remains a sizable group of full-time workers who live below the poverty threshold. Among those who participated in the labor force for 27 weeks or more and usually worked in full-time wage and salary jobs, 4.4 million, or 3.9 percent, were classified as working poor in 2012—little different from a year earlier. (See table 8.)

There are three major labor market problems that can hinder a worker's ability to earn an income above the poverty threshold: low earnings, periods of unemployment, and involuntary part-time employment. (See the technical notes for detailed definitions.)

In 2012, 84 percent of the working poor who usually worked full time experienced at least one of the major labor market problems. Low earnings continued to be the most common problem, with 68 percent subject to low earnings, either as the major problem or in combination with other

labor market problems. About 37 percent experienced unemployment as the main labor market problem or in conjunction with other problems. Only 6 percent of the working poor experienced all three problems: low earnings, unemployment, and involuntary part-time employment.

Some 720,000, or 16 percent, of the working poor who usually worked full time did not experience any of the three primary labor market problems in 2012. Their classification

as working poor may be explained by other factors, including short-term employment, some weeks of voluntary part-time work, or a family structure that increases the risk of poverty.

Technical Notes

Source of data

The data presented in this report were collected in the Annual Social and Economic Supplement (ASEC) to the Current Population Survey (CPS). The CPS is a monthly sample survey of about 60,000 eligible households, conducted by the U.S. Census Bureau for the Bureau of Labor Statistics. Data from the CPS are used to obtain the monthly estimates of the nation's employment and unemployment levels. The ASEC, conducted in the months of February through April, includes questions about work activity and income during the previous calendar year. For instance, data collected in 2013 refer to the 2012 calendar year.

Estimates in this report are based on a sample and, consequently, may differ from figures that would have been obtained from a complete count using the same questionnaire and procedures. Sampling variability may be relatively large in cases where the numbers are small. Thus, both small estimates and small differences between estimates should be interpreted with caution. For a detailed explanation of the ASEC supplement to the CPS, its sampling variability, and more extensive definitions than those provided in these technical notes, see *Income*, Poverty, and Health Insurance Coverage in the United States: 2012, Current Population Reports, P60-245 (U.S. Census Bureau, September 2013). This publication is available on the U.S. Census Bureau website at www. census.gov/prod/2013pubs/p60-245.pdf, and additional information about income and poverty measures is available at www.census.gov/hhes/www/income/income. html.

Material in this report is in the public domain and, with appropriate credit, may be reproduced without permission.

This information is available to sensory-impaired individuals upon request. Voice phone: (202) 691-5200; Federal Relay Service: (800) 877-8339.

For more information on the data provided in this report, contact the U.S. Bureau of Labor Statistics, Division

of Labor Force Statistics. Email: **cpsinfo@bls.gov**; Telephone: (202) 691-6378.

Comparability of estimates

The data presented in this release are not strictly comparable with data for earlier years due to the introduction of updated population estimates, or controls, used in the CPS. The population controls are updated each year in January to reflect the latest information about population change. Additional information is at www.bls.gov/cps/documentation.htm#pop.

Concepts and definitions

Poverty classification. Poverty statistics presented in this report are based on definitions developed by the Social Security Administration in 1964 and revised by Federal interagency committees in 1969 and 1981. These definitions originally were based on the Department of Agriculture's Economy Food Plan and reflected the different consumption requirements of families predicated on the basis of factors such as family size and the number of children under 18 years of age.

The actual poverty thresholds vary, due to the makeup of the family. In 2012, the weighted average poverty threshold for a family of four was \$23,492; for a family of nine or more people, the threshold was \$47,297; and for one person (unrelated individual), it was \$11,720. Poverty thresholds are updated each year to reflect changes in the Consumer Price Index for All Urban Consumers (CPI-U). Thresholds do not vary geographically. (For more information, see Income, Poverty, and Health Insurance Coverage in the United States: 2012, at www.census.gov/prod/2013pubs/p60-245.pdf.)

Low earnings. The low-earnings level, as first developed in 1987, represented the average of the real value of the minimum wage between 1967 and 1987 for a 40-hour workweek. The year 1967 was chosen as the base year because that was the first year in which minimum-wage legislation covered essentially the same broad group of

workers that currently is covered. The low-earnings level has been adjusted each year since then in accordance with the CPI-U, so the measure maintains the same real value that it held in 1987. In 2012, the low-earnings threshold was \$337.92 per week. For a complete definition, see Bruce W. Klein and Philip L. Rones, "A profile of the working poor," *Monthly Labor Review*, October 1989, pp. 3–11, at www.bls.gov/opub/mlr/1989/10/art1full.pdf.

Income. Data on income are limited to money income—before personal income taxes and payroll deductions—received in the calendar year preceding the CPS supplement. Data on income do not include the value of noncash benefits such as food stamps, Medicare, Medicaid, public housing, and employer-provided benefits. For a complete definition of income, see Income, Poverty, and Health Insurance Coverage in the United States: 2012, at www.census.gov/prod/2012pubs/p60-245.pdf.

Labor force. Persons in the labor force are those who worked or looked for work sometime during the calendar year. The number of weeks in the labor force is accumulated over the entire year. The focus in this report is on persons who were in the labor force for 27 weeks or more.

Working poor. The working poor are persons who spent at least 27 weeks in the labor force (that is, working or looking for work) but whose incomes still fell below the official poverty level.

Working-poor rate. This rate is the number of individuals in the labor force for at least 27 weeks whose incomes still fell below the official poverty level as a percent of all persons who were in the labor force for at least 27 weeks during the calendar year.

Involuntary part-time workers. These are persons who, during at least 1 week of the year, worked fewer than 35 hours because of slack work or business conditions or because they could not find full-time work. The number of weeks of involuntary part-time work is accumulated over the year.

Occupation. This term refers to the job in which a person worked the most weeks during the calendar year.

Unemployed. Unemployed persons are those who looked for work while not employed or those who were on layoff from a job and were expecting to be recalled to that job. The number of weeks unemployed is accumulated over the entire year.

Family. A family is defined as a group of two or more persons residing together who are related by birth, marriage, or adoption. The count of families used in this report includes only primary families. A primary family consists of the reference person (householder) and all people living in the household who are related to the reference person. Families are classified either as married-couple families or as those maintained by men or women without spouses present. Family status is determined at the time of the survey interview and, thus, may be different from that of the previous year.

Unrelated individuals. These are persons who are not living with any relatives. Such individuals may live alone, reside in a nonrelated family household, or live in group quarters with other unrelated individuals.

Related children. Related children are children (including sons, daughters, and step-children, or adopted children) of the husband, wife, or person maintaining the family, as well as other children related to the householder by birth, marriage, or adoption.

Race. White, Black or African American, and Asian are categories used to describe the race of people. People in these categories are those who selected that race group only. Data for the two remaining race categories—

American Indian or Alaska Native and Native Hawaiian or Other Pacific Islander—and for people who selected more than one race category are included in totals, but are not shown separately because the number of survey respondents is too small to develop estimates of sufficient quality for publication. In the enumeration process, race is determined by the household respondent.

Hispanic or Latino ethnicity. This refers to persons who identified themselves in the CPS enumeration process as being of Hispanic, Latino, or Spanish origin. People whose ethnicity is identified as Hispanic or Latino may be of any race.
